MW Meridian Works

DECISION BRIEF · SKILL CATALOG MAINTAINER

html-slides is pinned to a reference, not to its origin

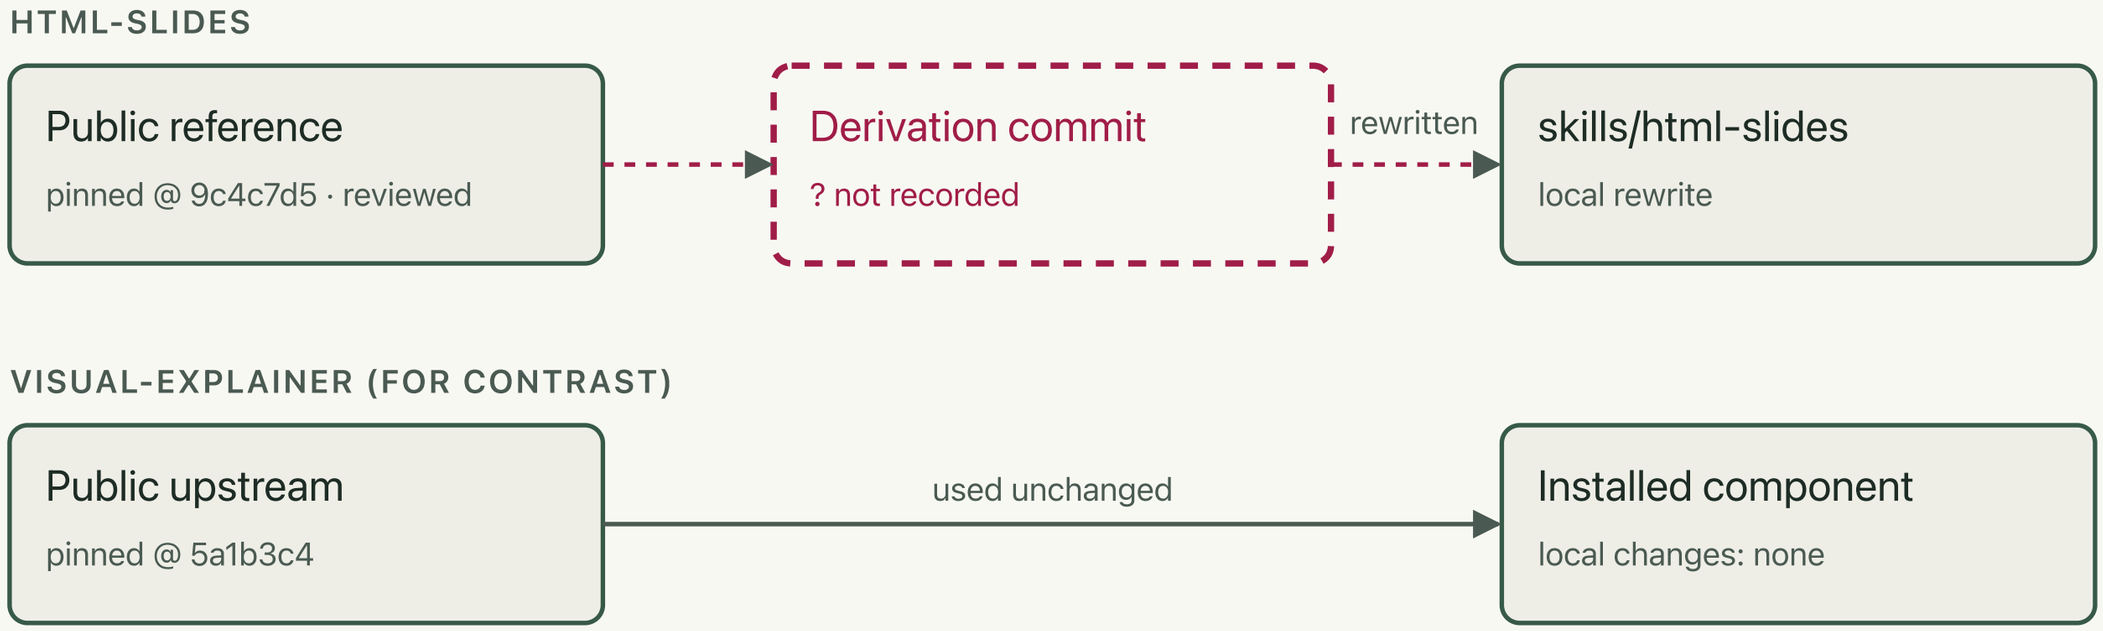

Should we search for the rewrite's original base commit, and replace the component with a traceable upstream if that search fails?

Evidence: catalog.yaml, docs/product-model.md

Provisional identity — not an official brand

THE GAP

The link between the pinned reference and our rewrite is unrecorded

Source: catalog.yaml · upstreams.html-slides-reference and upstreams.visual-explainer

OBSERVED EVIDENCE

Both records state the gap in plain words

FACT The reference is pinned: `claude-office-skills/skills` @ `9c4c7d5cd281…`, MIT, with a recorded digest.

FACT Its `localChanges` reads: “Rewritten in skills/html-slides; original derivation commit is not recorded.”

FACT The other four upstream records list `localChanges: none`.

FACT The product model places the presentation profile outside the V1 Solution Skill release set for this reason.

Source: catalog.yaml · upstreams Source: docs/product-model.md · Release lifecycle

CONSEQUENCE

Without a base commit, the rewrite cannot be reviewed as a diff

INFERENCE Curation asks us to inspect each component's local modification history. With no recorded base, we cannot show what our rewrite changed from the public source.

NOT MEASURED No cost, time, or customer impact has been measured for this gap.

OPTIONS

Search first; evaluate replacement only if the search fails

PROPOSAL A

Bounded provenance search

Search upstream history for the rewrite's base, within a time box you set. Record the commit or record that it cannot be found.

PROPOSAL B · FALLBACK

Evaluate a traceable replacement

Hypothesis: a pinned upstream with no local changes, such as visual-explainer, could serve the presentation profile. Fit not yet evaluated.

STATUS QUO

Change nothing

The presentation profile stays outside the V1 Solution Skill release set.

Source: catalog.yaml · upstreams.visual-explainer; docs/product-model.md

DECISION REQUESTED

Decision: authorize a bounded search, with replacement as the fallback

1. Approve a provenance search for the html-slides base commit, and set its time box.
2. If no base commit can be established, approve an evaluation of a traceable upstream as the replacement.
3. Leave every current pin and release unchanged until you have reviewed the result.

Answer: approve · approve with changes · decline
